## SUMMARY

Computer Science undergraduate entering 7th semester at FAST NUCES with hands-on MERN Stack and AI/ML engineering experience across a professional internship and four production-level personal projects. Proficient in ReactJS, Node.js, MongoDB, and Python machine-learning pipelines, with a demonstrated ability to adapt quickly in fast-paced environments, an eagerness to learn, and strong problem-solving skills that drive collaborative, team-oriented software development.

## EXPERIENCE

**MERN Stack Intern** · Devinity Solutions (US-based), Remote Jul 2025 – Sep 2025

- Worked as an active engineering team player to design, build, and ship production-grade MERN Stack applications using ReactJS components, ensuring cross-device UI/UX consistency across all screen sizes.
- Improved measured backend response latency by 30 % through Postman and Vitest profiling analytics by optimizing MongoDB schemas and RESTful API throughput.
- Applied structured problem-solving methodologies to resolve race conditions and async data-flow bugs, adapting rapidly to new tooling and delivering all sprint features on schedule in a fast-paced environment.

## EDUCATION

**B.S. in Computer Science** | FAST – National University of Computer & Emerging Sciences Expected August 2027  
7th Semester | CGPA: 3.0/4.0 | Courses: DSA, OOP, Software Design & Analysis, Operating Systems, Database Systems, Artificial Intelligence, Computer Networks, Digital Image Processing

## TECHNICAL SKILLS

**Languages:** JavaScript (ES6+), TypeScript, Python, PHP 8, C/C++, HTML5, CSS3

**Frameworks & Libraries:** React.js (ReactJS), Next.js, Node.js, Express.js, TailwindCSS, Redux Toolkit, Zustand

**Databases:** MongoDB, MySQL, Mongoose ODM, RESTful API Design

**ML / AI:** PyTorch, OpenCV, scikit-learn, XGBoost, EasyOCR, MobileNetV2, SVM

**Dev Tools:** Git, GitHub, Vercel, Postman, Vitest, Cloudinary CDN, Visual Studio Code, Codex, Unity

## PROJECTS

**E-Commerce Architecture (Marco Paints Project)** Next.js, TypeScript, MongoDB, Tailwind CSS, Zustand

- Architected 10+ RESTful API routes (catalog, cart, orders, wishlist, coupons); deployed on Vercel with SSR, code-splitting, and Cloudinary CDN image hosting with Nodemailer transactional email integration.
- Implemented NextAuth.js OAuth + JWT authentication, bcrypt-secured sessions, and Zustand global state with async server synchronization across a Mongoose ODM schema layer with field-level indexing.

**Pakistani Financial Screenshot Forgery Detector** Python, OpenCV, PyTorch, EasyOCR, SVM, XGBoost

- Developed an AI/ML end-to-end forgery detection pipeline using MobileNetV2 feature extraction, PCA, Error Level Analysis, EXIF metadata analysis, OCR text consistency, and copy-move detection.
- Trained a dual SVM + XGBoost soft-voting classifier; delivered a Tkinter GUI with confidence scores, forensic outputs, confusion matrix, and ROC curve evaluation reports for interpretable decision-making.

**InternBridge PK – Internship Management System** PHP 8, MySQL, PDO, JavaScript, Three.js, CSS3

- Engineered 3-role authentication (Admin/Student/Company) backed by a 10-table normalized MySQL database with 6 indexes, 3 aggregate views, and complex multi-table JOIN queries.
- Built a full application tracking pipeline, real-time notifications, and a responsive dark-mode UI with glassmorphism design and a WebGL Three.js animated background.

**BMW M Design System – Open Source Contribution** Git, GitHub, Markdown, pnpm, Vitest

- Contributed a schema-compliant BMW M design system to open-source nexu-io/open-design via fork-based workflow, covering brand colors, typography, components, accessibility rules, and responsive behavior.
- Formatted BMW M tricolor palette entries for automated swatch extraction, refined BMW Type Next typography tokens, and corrected accessibility contrast ratios to meet WCAG 2.1 compliance guidelines.

## CERTIFICATIONS

Programming for Everybody (Python) – University of Michigan, Coursera 2025

Introduction to Front-End Development – Meta, Coursera 2025
